

## Brainstorming & Idea Prioritization Template

|                      |                                     |
|----------------------|-------------------------------------|
| <b>Date</b>          | 15 July 2026                        |
| <b>Team ID</b>       | SWUID2026217449                     |
| <b>Project Name</b>  | Rising Waters - Flood Prediction ML |
| <b>Maximum Marks</b> | 3 Marks                             |

### Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

| S.No | Team Member          | Idea / Suggestion                                                   | Category   | Group No. |
|------|----------------------|---------------------------------------------------------------------|------------|-----------|
| 1    | Sunil Teja Junjunuri | Predict flood risk using historical rainfall and weather data       | ML Model   | 1         |
| 2    | Sunil Teja Junjunuri | Build a web dashboard for authorities to check flood risk instantly | Web App    | 1         |
| 3    | Sunil Teja Junjunuri | Compare multiple classification algorithms for best accuracy        | ML Model   | 1         |
| 4    | Sunil Teja Junjunuri | Deploy the system on IBM Cloud for wide accessibility               | Deployment | 2         |

### Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

| Group No. | Final Idea                                        | Feasibility (High/Medium/Low) | Importance (High/Medium/Low) | Priority | Selected (Yes/No) |
|-----------|---------------------------------------------------|-------------------------------|------------------------------|----------|-------------------|
| 1         | ML flood risk prediction using weather indicators | High                          | High                         | 1        | Yes               |
| 2         | Flask web dashboard for real-time predictions     | High                          | High                         | 2        | Yes               |
| 3         | IBM Cloud                                         | Medium                        | Medium                       | 3        | No                |
